

SMOKE ALARMS

TYPES OF ALARMS AND WHERE TO INSTALL

Having the right alarm with correct placement is important for early notification of a fire.

SMOKE ALARMS

An ionization smoke alarm is generally more responsive to flaming fires, and a photoelectric smoke alarm is generally more responsive to smoldering fires. Both types of alarms and combination ionization-photoelectric alarms are recommended. **Recommend 10-year lithium battery only.** ***If you come across a 9-Volt alarm, change to a 10-year lithium battery alarm.**

Install: One in each bedroom, one on each level of your home, and outside sleeping area's.

HOME AWARE 2- Alarm Only

HOME AWARE 2 - Weather Bundle

For visually impaired, hearing impaired, deaf, blind, and elderly. Bed shaker interconnects with smoke alarms, vibrate, doorbell, and other disability accessible devices.

Install: Bed shaker is placed in your bedroom, next to your bed.

Weather: Public-alert certified monitor receives 7 NOAA channels with flood, tornado, thunderstorm, and more

NOTE: MUST have STANDARD or other disability smoke alarms throughout house and Wi-Fi connected to bed shaker.

NEST ALARM

Smoke/CO combo that alerts your phone and voice activates, with warning and emergency tones to each alarm and room in the house. We suggest those that are technically savvy will like these. Also suited well for kids with Autism or Sensory disabilities.

Install: One in each bedroom, one on each level of your home, and outside sleeping area's.

NOTE: MUST have STANDARD alarms throughout the house if you only have ONE alarm. If you only had one the best location would be outside the sleeping area or in the bedroom.

CO Detector/or COMBO Alarm

ONE CO Detector or COMBO Alarm should be placed in each home. The best locations are outside sleeping areas and mechanical rooms of the home.
